

# User Information for Data Users

The institutional repository GUDe is a service offered by Goethe University to its members and collaborating researchers and is jointly implemented by the Johann Christian Senckenberg University Library (UB) and the University Computing Center (HRZ).

GUDe offers a platform for the storing and publishing research data based on the FAIR criteria. The rights holders can make their research data available in a restricted or unrestricted form (open access) at their own discretion. The selection, compilation and description (incl. metadata) of the research data as well as the quality control of the content are carried out exclusively by the rights holders.

In the following, research data with the accompanying metadata are referred to as **digital objects**, and public datasets without research data are referred to as **datasets** (for example, for projects, institutions, and individuals).

1. The legal relationship between you as Data User and Goethe University is limited to your ability to download digital objects and datasets from GUDe.
2. Goethe University is entitled to block access to digital objects and datasets and/or delete them if there are specific indicators of a violation of third-party rights.
3. In addition, Goethe University reserves the right to change or restrict the functionality, appearance and Terms of Use of GUDe at any time or to discontinue the service altogether.
4. If you register as Data User or legitimize yourself via Shibboleth or ORCID, you may also be granted access to unpublished research data by the rights holders.
5. The privacy information for GUDe and for this website can be found [here](#).
6. Goethe University does not assume any warranty or liability for the accuracy, timeliness and reliability of the research data provided by the rights holders and any further datasets stored in addition, except in the case of mandatory legal liability. In particular, Goethe University does not check the actual legal situation, especially with regard to protectability and rights ownership.
7. The use of GUDe and the download of digital objects and datasets is currently free of charge.
8. You are obligated to comply with the license regulations associated with the digital objects and datasets. The respective license terms are linked and viewable in the metadata of the research data.
